NG (Next Generation) Series

The Stress Free team has been at the forefront of anchor winching for 10 years and the NG Series is the result of the design teams dedication, innovation and commitment to lead the way.

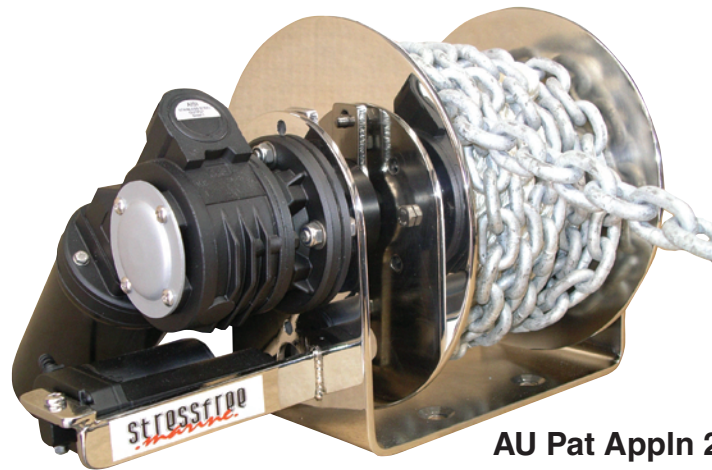

The wait is over!

To celebrate our 10th anniversary we have released the NG Series. The result is a truly fast, stylish, strong anchor winch with the latest of metal finishing and NG (Next Generation) features. All NG Series models have the free fall system engineered into the winch. Makes anchoring a breeze. Those spots that you used to dream about are now right within your reach with an NG Series Stress Free.

Features:

- Superfast – will free fall at 600 feet/minute
- Can power up and power down. Will lower and retrieve at 80 – 90 feet/minute
- Heavy duty maintenance free gearbox
- Responsive – no more over runs. The winch will take off and free fall at 600 feet/minute – once the anchor hits the bottom the revolution speed of the drum will slow down then stop.
- Takes the guess work out of anchoring
- The Free Fall mechanism can be retro-fitted as an after market purchase
